EDUCATION

Louisiana State University (LSU), Baton Rouge. LA *GPA: 3.5* | **May 2026**

Bachelor of Science: *Computer Science – Software Engineering*

Relevant Coursework: *Data Structures & Algorithms, Systems Programming (C/Linux), Object Oriented Design, Computer Organization and Design, Interface Design and Technology*

Awards and Honors: *$1,000 BASF STEM Scholarship*

SKILLS

- **Programming Languages:** JavaScript, TypeScript, Python, Java, HTML, CSS, C
- **Frameworks:** React.js, Node.js, Next.js, FastAPI, Flask
- **Development Tools:** Linux, Git, JIRA, Azure DevOps, Postman, Docker, Claude Code, Cursor
- **Backend and Cloud:** Firebase, Supabase, SQL, PostgreSQL, Vercel, AWS, S3

EXPERIENCE

Dealer Services Network – *IT Intern* **March 2026 – Present**

- Built an internal web application for data tracking and collection using **React**, **TypeScript**, and **Vercel**, used across the team to streamline daily workflows.
- Automated data collection by integrating **Microsoft Graph API** to extract and process **Excel** reports directly from **Outlook** emails on a scheduled basis.
- Managed and verified business entity records in **Business Central**, identifying and resolving data processing errors to maintain accuracy.

Nola Education – *Software Development Intern* **May 2025 – Aug 2025**

- Built an automated transcription service using **OpenAI Whisper** that eliminated a manual multi-step workflow for the content team, generating VTT caption files for 2,000+ English and Spanish media files.
- Integrated the service into a **FastAPI** app on **Vercel** with a **Cron Job** scanning **S3** every 5 minutes, removing the need for manual uploads and handoffs between the content and product teams.
- Implemented a **Python Playwright scraper** to migrate 5,000+ assets from **Althea** into **Odoo**, using an Odoo Sandbox to test via API before pushing to production.
- Edited **XML-based** learning modules and configured **Moodle** with **PostgreSQL** for integration testing.
- Led **Agile ceremonies** in **Azure DevOps**, authored **Given-When-Then user stories**, and worked in a **Scrum environment.**

PROJECTS

Market Gauge | *Full-Stack Developer*

LSU Capstone Project

- Used **React**, **JavaScript**, and **Material UI** to build a web application that grades a stock's reliability based on their market cap, volatility, and liquidity.
- Powered by a **Python** and **FastAPI** backend with a **Machine Learning** model built using **scikit-learn** to classify and score each stock.
- Trained a **classification** model on a **dataset** of 3,500+ stocks from **Kaggle**, using a custom algorithm that returns a grade on a two-scale system from F0 – A10.
- Implemented a 30-day stock price forecast using **Linear Regression** for prediction.
- Used **Twelve-Data's API** and **WebSocket** to retrieve stock information and render real-time stock prices.

Amazon Seller Notification Service | *Backend Developer*

Personal Project

- Used **Python** and Amazon's SP-API (Selling-Partner API) to establish a secure connection to Amazon Seller Central.
- Utilized a **Telegram** bot to send notifications when a new order was placed, detailing the total price and number of units sold.
- Integrated **Supabase** for structured order tracking and deployed to **Vercel** for a cost-effective and scalable system.

ACTIVITIES

- **3rd place at WICS Geaux Hack the Globe 2024** (& Best Presentation) and **WICS Hackathon 2025** (Intermediate).
- Member of LSU Muslim Student Association.
